Acknowledgment

I would like to express my sincere gratitude to my respected teacher, **Mr. Sattya Bahadur Maharjan**, for his continuous guidance, valuable feedback, and encouragement throughout the development of my e-Governance project. His insights and support have been instrumental in shaping the direction of this work.

I am also thankful to the Department of Computer Science & Information Technology, **Amrit Science Campus**, for providing me the opportunity to work on this project, which has enhanced my practical knowledge and skills in the field of e-Governance and web development.

Finally, I would like to appreciate the contribution of open-source communities, frameworks, and online resources that provided essential tools and references during the development process.

This project has been a great learning experience for me, and I am grateful to everyone who has supported me directly or indirectly in the successful completion of the **Municipality Information Portal**.

Abstract

This project report presents the design and development of the **Municipality Information Portal**, a web-based platform created as part of the E-Governance course at Tribhuvan University, Amrit Science Campus. The portal aims to provide a centralized and user-friendly system for accessing important information and services related to municipalities.

The portal has been developed to address the challenges faced by citizens in obtaining official notices, service-related guidelines, and other public information in a systematic manner. It offers a structured and interactive platform where municipal data and resources can be accessed efficiently.

The report begins with an introduction to the project's background, objectives, scope, and methodology. It then describes the features and functionalities of the system, including notice publication, service information display, contact details, and user-friendly navigation. The tools and technologies used in the development, such as **React.js, Tailwind CSS, and Vercel hosting**, are outlined along with the system design and implementation process.

Screenshots of the user interface are included in the appendix to illustrate the layout and features of the portal. The report concludes with the future scope of extending the platform to include more advanced e-governance functionalities such as citizen feedback systems, online service applications, and integration with municipal databases.

1. Introduction

1.1 Background

E-Governance has become an essential component in transforming traditional government services into digital platforms that ensure transparency, accessibility, and efficiency. Citizens often face challenges in obtaining official information, notices, and service details from local municipal offices. To address these issues, a centralized portal can act as a bridge between citizens and the municipality.

The **Municipality Information Portal** is developed as an initiative to provide a simple yet effective platform where citizens can easily access municipal notices, service-related information, and contact details. By leveraging modern web technologies, this system promotes the objectives of e-Governance by improving communication and ensuring that information is available to all in a user-friendly manner.

1.2 Objectives

The main objectives of the Municipality Information Portal are:

- To provide an online platform for publishing and accessing **municipality notices and updates**.
- To display **service-related information** such as registration, licensing, and other municipal facilities.
- To ensure **easy navigation and accessibility** for all citizens.
- To reduce dependency on manual processes and encourage digital adoption.
- To serve as a **foundation for future e-Governance applications** like online service requests and citizen feedback systems.

1.3 Scope

The scope of this project includes:

- Development of a **responsive web portal** accessible on desktop and mobile devices.
- Implementation of **notice board and service information sections**.
- A simple, user-friendly design with clear categorization.
- Hosting the portal online using a reliable and scalable platform.
- Providing structured information that can be expanded with more services in the future.

1.4 Methodology

The development of this project follows a **semi-waterfall model** with the following phases:

- **Requirement Analysis:** Understanding the needs of citizens for accessing municipal data.
- **Design:** Creating a layout that ensures simple navigation and accessibility.
- **Development:** Implementing frontend components using React.js and styling with Tailwind CSS.
- **Testing:** Verifying usability, responsiveness, and accessibility across devices.
- **Deployment:** Hosting the system on Vercel for public access.

1.5 Need Analysis

In Nepal, many municipalities still rely on physical notice boards or local announcements to disseminate information. This often results in limited reach and delays in communication. By creating an **online municipality portal**, citizens can access information anytime and anywhere, ensuring transparency and timely updates.

2. Features and Functionality

- **Homepage with Navigation Menu:** Clean and simple interface for accessing different sections.
- **Notice Board Section:** Displays official municipal notices and updates.
- **Services Section:** Provides information about services such as registration, tax payment, licensing, and other municipal facilities.
- **About Section:** Shares information about the municipality, vision, and mission.
- **Contact Section:** Provides contact details of municipal offices for citizen communication.
- **Responsive Design:** Ensures usability across devices including mobile and desktop.
- **Search and Accessibility:** Citizens can quickly find relevant information.

3. Tools and Technologies

- **Frontend:** React.js with component-based architecture.
- **Styling:** Tailwind CSS for responsive and modern UI design.
- **Hosting:** Vercel for deployment and scalability.
- **Version Control:** Git & GitHub for source code management.
- **Additional Tools:** Online open-source libraries for icons, fonts, and UI components.

4. System Design

4.1 Architecture

- **Client (Frontend):** React.js application running in the browser.
- **Hosting:** Deployed on Vercel cloud platform.
- **Data Layer:** Static/dynamic JSON data for notices and services.
- **User Interface:** Tailwind CSS for layout and responsiveness.

4.2 User Interface Design

The UI is designed with a clean layout:

- Header with navigation bar.
- Homepage with welcome section and highlights.
- Dedicated pages for Notices, Services, About, and Contact.
- Footer with quick links and contact details.

5. Implementation

- Developed using **React.js functional components**.
- Applied **Tailwind CSS** for styling and responsiveness.
- Used **React Router** for navigation between pages.
- Data such as notices and services structured in JSON and displayed dynamically.
- Deployed using **Vercel**, ensuring fast global content delivery.

6. Testing

- **Unit Testing:** Checked each React component for proper rendering.
- **Responsive Testing:** Verified layout on desktop, tablet, and mobile devices.
- **Performance Testing:** Ensured fast loading times using Lighthouse.
- **Accessibility Testing:** Checked color contrast and font readability.

7. Deployment

The project is deployed on **Vercel** with the following process:

- Code hosted on GitHub.
- Continuous deployment enabled with GitHub-Vercel integration.
- Automatic build and deployment on every code update.
- Custom domain mapping possible for official municipality use.

8. Future Scope

- Adding **citizen login and registration system**.
- Implementing **online service request forms** (birth certificate, tax payment, etc.).
- Integrating **chatbot or live support system** for citizen queries.
- Expanding database integration for dynamic updates.
- Mobile application for wider accessibility.

9. Conclusion

The **Municipality Information Portal** successfully demonstrates the use of e-Governance concepts in creating a citizen-focused digital service platform. It addresses the gap in information dissemination by providing a centralized online portal that is accessible, efficient, and user-friendly.

This project not only enhances transparency and accessibility but also lays the groundwork for more advanced e-Governance applications in the future. With further development, the portal can be transformed into a fully functional municipal service platform supporting digital transactions, feedback systems, and integration with government databases.

Annual Budget Meeting - Public Consultation

Event **High Priority**

Published on March 1, 2024

The municipality invites all citizens to participate in the annual budget consultation meeting scheduled for March 15th, 2024, at 7:00 PM in the City Hall auditorium. Your input on budget priorities and community needs is valuable for planning the upcoming fiscal year.

Water Supply Maintenance - Ward 2

Notice **High Priority**

Published on March 5, 2024

Scheduled maintenance of water supply infrastructure in Ward 2 will take place on March 10th, 2024, from 9:00 AM to 5:00 PM. Residents may experience low water pressure or temporary interruptions. Alternative water supply will be available at community centers.
